In Digital Signage, content is the king. When you have thousands of video, images, and text files, effectively managed and distributed your content to the display is the key of the successful digital signage network. Today, many digital signage are still running stand-alone because of the cost and complication of the network solution. What industry need is a turn key system that is simple, easy, flexible, and cost effective. It should use web technology, utilize Internet resources, but not tie to any proprietary hardware.

You need iSeeBoard.

iSeeBoard provides SaaS/Cloud based digital signage platform that can effectively manage your content. It is easy-to-use, quick-to-deploy that can help business, small to large, to increase sales, improves communication, and enhance corporate image.

- Simple to install, quick deployment, easy to use.
- Powerful content management studio.
- Flexible server configuration for small to large applications.
- Run on popular platforms (Linux, Windows, IIS, Apache...)
- No fix IP needed. Work with different media players.
